HealthSapiens

We're Re-imagining How Healthcare Works

Bypassing conventional healthcare systems, we empower patients to access the best possible care through a decentralized peer-to-peer platform.

ABOUT US

HealthSapiens' vision is the democratization of healthcare, creating more freedom for patients to choose their care. We are committed to the ideals of health and wellness for all, through global collaboration – one patient at a time.

THE PROBLEM

The healthcare system is failing – and patients and providers are sick of it. High costs, limited access and transparency, insurance restrictions, and a lack of quality services prevent people from getting the best possible care.

THE SOLUTION

HealthSapiens removes the roadblocks of conventional healthcare systems. With access to a worldwide peer-to-peer (P2P) healthcare and wellness ecosystem powered by blockchain technology, consumers can seek the services they desire from peer-reviewed providers.

BENEFITS OF HealthSapiens

1 MORE ACCESS + TRANSPARENCY

An open and contributor-controlled platform ensures patients can make decisions knowing providers are peer-reviewed and ranked based on their medical care outcome and performance. It also allows users to securely share electronic medical records (EMR) with care providers, improving both access to and accuracy of care.

2 LOWER COSTS + LESS MIDDLEMEN

HealthSapiens decentralizes healthcare by cutting out the middlemen – and costs – such as healthcare provider networks, insurance carriers, etc. This enables consumers and providers to be more proactive and preventative about health by allowing both groups to directly-interact with each other.
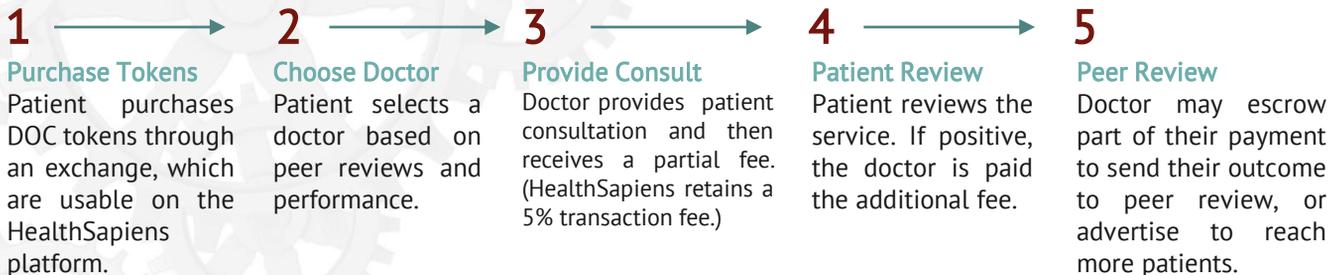

3 EASILY COMPARE AND CONTRAST

The HealthSapiens platform allows patients to see and compare prices, and eliminates provider overhead expenses, such as insurance billing. A token currency also means no local conversion, accelerating the payment process.

HOW IT WORKS

HealthSapiens improves transparency and increases trust between consumers and the healthcare community with an **outcome-based model.**

1
Purchase Tokens
Patient purchases DOC tokens through an exchange, which are usable on the HealthSapiens platform.

2
Choose Doctor
Patient selects a doctor based on peer reviews and performance.

3
Provide Consult
Doctor provides patient consultation and then receives a partial fee. (HealthSapiens retains a 5% transaction fee.)

4
Patient Review
Patient reviews the service. If positive, the doctor is paid the additional fee.

5
Peer Review
Doctor may escrow part of their payment to send their outcome to peer review, or advertise to reach more patients.

With accountability for services provided, HealthSapiens moves the typical payment model for healthcare from a **fee-for-service system to a value-based one.**

WHY TOKENIZE?

A blockchain-based healthcare platform enables a more transparent and effective healthcare system.

OUR ERC20 TOKEN

An ERC20 token, DOC lets patients pay for care, no matter where they are in the world. With the Ethereum blockchain as its foundation, the platform marginalizes the need for intermediaries such as insurance companies – and creates transparency and accuracy around the healthcare and providers.

REWARDS POOL

Patients, doctors, researchers and pharmaceutical companies can all benefit through the HealthSapiens Rewards Pool. Users can earn tokens by reviewing a doctor, securely-sharing Electronic Medical Records, holding tokens in their digital wallet, referring new users, and achieving specific health-related goals
